

Metal bond Cutting Wheel

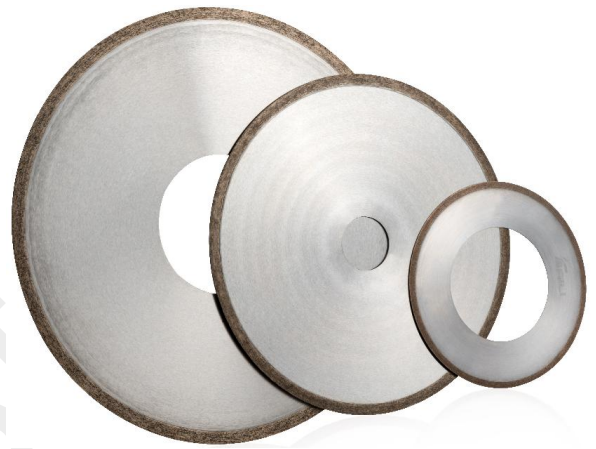

Introduction

Metal bond cutting wheels are made from the sintering of alloy powders and other fillers with either diamond grains or CBN grains.

Application

Diamond cutting wheels: used for cutting glass, quartz, sapphire, ferrite, composite, ceramic, silicon, refractory, tungsten carbide and so on.

CBN cutting wheel: used for cutting alloy steel, soft steel and other steel materials.

Cutting wheel with core

Features

Long using life, high cutting efficiency, no burning, no chips, perfect surface finish.

Available dimensions:
